

27 52 25 – Assistive Listening Systems

1. General

- A. Assistive Listening Systems (ALS) are intended to augment standard public address and audio systems by providing signals which can be received directly by persons with special receivers or hearing aids that eliminate or filter background noise. Provision of these systems shall meet ADA standards. To the maximum extent possible, system installations should ensure compatibility with the current FM and infrared systems throughout the campus and health system.
